UTILITY

# Unity Etoken

Unity Etoken token is the first ever crypto project which is a community experimental project functioning fully decentralised and transparent to its user

community is the real owner of the project.

The every phase and project decision are taken by community in open source platforms i.e presently through GitHub medium

some main features

fully decentralised

user benefit

zero chance of bad practices (rugg/scam)

# UNITY FUNDAMENTAL

our base fundamental is simple and powerful in every possible aspects as it is in algorand ecosystem which is fast ,secure , reliable ,low transfer fee to achieve health and secured environment for our community to grow

our mission is to provide the user and the crypto enthusiastic people authentic crypto project which is legit and developed for the beneficial of the community everything is controlled by the community from voting to the development and community has the power to change regarding any project fundamentals

# REWARDS

In early phases there will be high staking reward staggering from 1000% Apr exponentially inclined or declined delivery system will be there.

After couple extension and priorities Apr will be set as per the community growth and contribours

Any one can get staking rewards as per holding it

Governance rewards is the reward which will be handed/distributed over to the user who participat in voting ,making decision

views, solution , suggestions over on a topic for the project development it will be in open source platforms or within community groups

This rewards it for the contributor who will help the community to develop further with much possible way in the early phases the rewards allocation is

$1^{10}$  time for user last longer only 1 months

adding liquidity, gathering funding ,ico ,ipo

# UTILITY

The basic utility of our system is that to create crypto awareness to crypto society and crypto enthusiastic people who are in crypto world our platform through social platform and from our content provide the necessary related only legit information to the users where as in the crypto society the number is increasing day by day and the users who performed bad practices of crypto is also increasing so to reduce and to control this events. our platform will introduce new development and financial audit security systems that not only secure the network but also do audit of project from the team to its fundamentals, it practices making it a transparent and let it to the user and so much more development has to be published and stay tuned
